SUMMARY

Final-year CSE student with an internship in Python and ML engineering. Proficient in Python, SQL, MySQL, Pandas, and Power BI for data extraction, cleaning, statistical analysis, and visualization. Skilled in ETL pipelines, KPI reporting, and REST API development. Seeking a Data Analyst or Python Developer role.

PROFESSIONAL EXPERIENCE

Python Developer Intern

Jul 2025 – Aug 2025

LUMIQ.AI

On-site

- Built ML-based document forgery detection system achieving ~93% accuracy, cutting manual verification by 60%.
- Performed EDA and statistical analysis on 10,000+ samples using Pandas & NumPy to identify key forgery patterns.
- Integrated Hugging Face ViT-Base (Vision Transformer) into an end-to-end inference pipeline covering data preprocessing, model inference, and response formatting.
- Deployed production-ready REST API (FastAPI) serving real-time predictions at sub-200ms response times.

PROJECTS

Sales & Customer Data Analysis Dashboard | Python, MySQL, Pandas, Matplotlib, Power BI, Excel

- Queried MySQL database of 50,000+ records using advanced SQL (joins, window functions, aggregations) to extract KPIs and business insights for stakeholder reporting.
- Built Python + Pandas ETL pipeline for data cleaning, transformation, and EDA; delivered interactive Power BI dashboard visualizing revenue trends, churn, and top-performing products.
- Automated monthly statistical reporting via Python scripts, reducing manual effort by ~70%.

GROBS.AI – AI Resume Intelligence Platform | Python, FastAPI, Google Gemini, Hugging Face

- Developed Python + FastAPI backend with JWT authentication; collaborated with a partner on React frontend, database layer, and system integration.
- Integrated Google Gemini 1.5 Flash for LLM-powered resume scoring, ATS analysis (0–100), job-fit optimization, and cover letter generation.
- Implemented AI resume parsing using Hugging Face NER and PDFPlumber for automated data extraction from uploaded PDFs.

Forensic Insight – Document Forgery Detection | Python, FastAPI, Hugging Face, Postman

- Integrated Hugging Face pre-trained forgery detection model into a production-ready inference pipeline achieving 93%+ classification accuracy.
- Designed and deployed a FastAPI REST API for real-time document verification, handling structured JSON requests and responses with enterprise-grade error handling.
- Performed data preprocessing and feature analysis on document datasets using Pandas, ensuring clean and consistent inputs to the model pipeline.

EDUCATION

SRM Institute of Science and Technology

B.Tech in Computer Science and Engineering | CGPA: 7.42/10

Sonipat, India

2022 – 2026

TECHNICAL SKILLS

Languages: Python, SQL, Java, C

Data Analysis: Pandas, NumPy, Matplotlib, Statistical Analysis, EDA, Data Cleaning, ETL Pipelines, KPI Reporting

Databases: MySQL, SQLite

Visualization & BI: Power BI, Matplotlib, Microsoft Excel (Pivot Tables, VLOOKUP)

ML / AI: PyTorch, Scikit-learn, Hugging Face Transformers

Web / API: FastAPI, REST API Development

Tools: Git, GitHub, , Postman, Jupyter Notebook, VS Code , Databricks

Concepts: Data Visualization, Business Intelligence, Stakeholder Reporting, Machine Learning, NLP, Computer Vision

Soft Skills: Problem-Solving, Communication, Adaptability, Team Collaboration
